

Marked improvement in schedule reliability in November 2024

Sea-Intelligence has published issue 160 of the *Global Liner Performance (GLP) report*, with schedule reliability figures up to and including November 2024. As the report itself is quite comprehensive and covers schedule reliability across 34 different trade lanes and 60+ carriers, this press release will only cover the global highlights from the full report.

In November 2024, global schedule reliability improved by 4.1 percentage points M/M to 54.8%, which is the highest point it has been at in 2024 so far. That said, even with that M/M improvement, schedule reliability has largely remained within the 50%-55% range in 2024. The average delay for LATE vessel arrivals improved, decreasing by -0.43 days M/M to 5.41 days. Despite the improvement, this is the second-highest figure for the month, only surpassed by the pandemic high of 2021.

Maersk was the most reliable top-13 carrier in November 2024 with schedule reliability of 61.9%. There were 8 carriers with schedule reliability of 50%-60%, with the remaining 5 carriers within a narrow 47%-50% range. Wan Hai was the least reliable with 47.3% schedule reliability. In November 2024, the difference between the most and least reliable carrier dropped to under 15 percentage points. All top-13 global carriers recorded a M/M improvement in schedule reliability, with PIL recording the largest increase of 14.6 percent points. On a Y/Y level, only Yang Ming recorded an improvement, while 6 carriers recorded double-digit declines.
