

## Global schedule reliability increases to highest YTD level

Sea-Intelligence has published issue 154 of the *Global Liner Performance (GLP) report*, with schedule reliability figures up to and including May 2024. As the report itself is quite comprehensive and covers schedule reliability across 34 different trade lanes and 60+ carriers, this press release will only cover the global highlights from the full report.

In May 2024, global schedule reliability improved by 3.8 percentage points M/M to 55.8%. This is now the highest schedule reliability figure for 2024, and 1.2 percentage points higher than the previous highest figure of 54.6%. On a Y/Y level however, schedule reliability in May 2024 was -11.0 percentage points lower. Despite the improvement in schedule reliability, the average delay for LATE vessel arrivals deteriorated, increasing by 0.34 days M/M to 5.10 days. This figure is now inching closer to the pandemic highs than the pre-pandemic lows. On a Y/Y level, the May 2024 figure was 0.73 days higher.

CMA CGM was the most reliable top-13 carrier in May 2024 with schedule reliability of 57.1%. There were another 7 carriers above the 50% mark, with the remaining 5 carriers in the 40%-50% range. PIL was the least reliable carrier with schedule reliability of 44.5%. 10 of these carriers were able to record a M/M improvement in schedule reliability in May 2024, with Maersk and CMA CGM recording the highest improvement of 6.0 percentage points. Wan Hai recorded the largest decline of -4.5 percentage points. On a Y/Y level, none of the 13 carriers recorded an increase in schedule reliability, with 8 carriers recording double-digit Y/Y declines.
