

## Schedule reliability declined slightly in September 2022

Sea-Intelligence has published issue 134 of the *Global Liner Performance (GLP) report*, with schedule reliability figures up to and including September 2022. As the report itself is quite comprehensive and covers schedule reliability across 34 different trade lanes and 60+ carriers, this press release will only cover the global highlights from the full report.

Global schedule reliability declined by -0.7 percentage points M/M in September 2022 and reached 45.5%. The average delay for LATE vessel arrivals has been dropping consistently since the start of the year. In September 2022, average delay improved once again, dropping by another -0.10 days M/M to 5.81 days. This is the second consecutive month that the average delay figure has dropped below the 6-day mark since April 2021.

With schedule reliability of 53.2%, Maersk was the most reliable carrier in September 2022, followed by CMA CGM with 45.5%. Another 4 carriers recorded schedule reliability of 40%-50%, whereas the rest all had schedule reliability of 30%-40%. Yang Ming recorded the lowest schedule reliability of 35.1%. In September 2022, once again, most of the carriers were very close to each other, with the difference between Yang Ming at the bottom and CMA CGM at second, a little over 10 percentage points. Only 5 of the top-14 carriers recorded a M/M improvement, whereas all 14 recorded a Y/Y improvement, with 10 of those carriers recording double-digit improvements, and 2 carriers recording improvements of over 20 percentage points.
